Professional Summary

I am a jack of all trades. I primarily work as a principle information security consultant where I build automation tools, handle the DevOps engineering, and custom integrations for Sailpoint IIQ. I like to work with cutting edge tech and have recently began working into applications of machine learning in the field of information security. I also operate a small tech startup that provides software engineering services to clients in north Texas as well as some internal software and hardware projects. The latest internal project was the common interest media platform, FLX.
